## Bug report

### Description of bug encountered:

When logging in as user, the menu would not open.

### Code responsible for bug (if known):

```
public void loggedInFrame(int auth) {  
    if (auth > 0) { // doing authorization here  
        Menu regFace = new Menu(auth);  
        regFace.setVisible(true);  
        dispose();  
    }  
}
```

### Is bug input dependent (yes/no):

Yes

### If yes, example inputs:

Input any correct username and password combination that authorizes.

Select User from combobox

### Console error output from bug (if any):

No console error output

### Comments:

Bug identified as front end issue but bug lies in back end.
