Issues list - stage 5

Problem found	Solved? (Y/N)	Solution
If a record is amended, not confirmed and then back is pressed, the view is permanently changed - should return to old view **(From stage 4 unsolved issues)**	N	
If a new record is created, not confirmed and then back is pressed, the view is permanently changed - should return to old view **(From stage 4 unsolved issues)**	N	
If a record is amended and back is pressed - there should be a confirmation message similar to "You have made changes. Are you sure you want to go back?" **(From stage 4 unsolved issues)**	N	
If a record is created and back is pressed - there should be a confirmation message similar to "You have made changes. Are you sure you want to go back?" **(From stage 4 unsolved issues)**	N	
Review page was implemented as a single page that is scrollable. Would be better to redo the implementation so that it is 2 pages as it appears like this in the old system.	Y	Implementation now redone, when next is clicked the second page will replace the first.
Second page of the review panel has a box that is not inline.	Y	
The second review section's labels have a mismatch of lower and uppercase letters (no convention) e.g. some start with a lower case some with an upper.	Y	
On the second review page the buttons aren't big enough to show the full text. For example, Create review reads Create Revi.. instead	Y	
On the second review page the input field descriptors are aligned differently. Should either all align on the center or all align on the left side not a mixture of both.	Y	
On the first review page some of the input boxes are of slightly different length	Y
